input file   output file
Türkiye Büyük Millet Meclisi   TBMM

The letter is B

Matematik Mühendisliği Programlama Dilleri 2 Çalışma Soruları

1. Write a C program that reverses the information without using another file pointer n a text file. (For example, if the file content is "Yıldız Teknik", this file content will change to "kinkeT zidliY".

2. Write a C program that keeps the abbreviation of the data in the file in another file by taking the letters after the White space character in a text file. (Example if file data is "Türkiye Büyük Millet Meclisi", The progrram should write "TMMM" into another file.

3. As is known, encryption is very old. The most primitive coding technique is done by shifting the letters one in the text to the right. According to this information, write a C program which encryptes the ind-formation in a text file by shifting the letters in the English character set to a right ('a' ->'b', 'b' -> 'c', ..., ,'z'->'a' For example, if the character string is "Yildiz" then the file must be "Zjmeja".

4. Write a C program that resolves the encrypted file given in the fourth question and converts it back to its original form. For example, if the file content string is " Zjmeja ", then the content of this file should be " Yildiz ".

5. Write a C program that capitalizes the first characters of the words in the file. (For example, if the file contents is "yildiz technical university", the file should be changed to "Yildiz Tchnical University")
